

KNOW ROADSIDE  
SAFETY,  
NO INJURY!

## ROADSIDE KIT

There is a reason **Transport ministers** recently agreed to a package of amendments to Australian road rules to **broaden the scope** of when warning triangles need to be used. Rather than **risking damage or physical harm** from or to bypassing traffic, emergency triangles stand out and provide notice to other drivers of your presence.

A **quality triangle** should have the following features:

- No tools required for assembly.
- Fluorescent inner triangles for daytime use.
- Needs no power source- the safety triangles reflect natural light for maximum visibility.
- Designed to maintain stability even in high winds and incremental weather.

Available in a **number of combinations**, ranging from national **workplace compliant** first aid contents to personal first aid necessities to ensure you can invest in the perfect kit, **additional triangles** also available to fulfil needs.
